

Ajax & fetch Lab

- 1- Use jQuery to write a JS function that loads an online resource into a div with id "text". Make a request to "text.html" and replace the target div's content with the returned HTML. Create the files ajax-load.html and text.html and place them in the same folder, so that your script can find the latter.
- 2- At previous last js lab for creating datatable with static Array Of Student Replace this static Array with Fetching Data using (*Fetch Or Ajax*) from offline instructor file and return Array Of instructors use it for all your crud Operations
- 3- At your List Task bind this list from online Request for any list of items and run all operations on it
